Law Changes

The Female Orgasm Research Institute, Women's Cannabis Project, and Female Orgasm Training Institute unite science, policy, advocacy, and education to advance women's sexual and reproductive health.

The Female Orgasm Research Institute

Pioneering scientific research at the intersection of sexual health, neuroscience, and cannabis therapeutics since 2018

Our Mission and Foundation

Established 2018

The Female Orgasm Research Institute was founded to identify proven pathways to female orgasm and to reduce the persistently high percentage of women suffering from orgasm difficulty.

Research Focus Areas

- Neurobiological mechanisms of female orgasm
- Cannabis compounds and sexual response
- Evidence-based interventions for sexual wellness
- Educational programs for healthcare providers

Groundbreaking Research Findings

Our institute has published two peer-reviewed research papers examining the relationship between cannabis use and female orgasm, validating research conducted on female orgasm during the last 50 years.

Statistical Significance

Statistically significant correlations between cannabis use and enhanced orgasm frequency, ease, and satisfaction among female participants.

Clinical Implications

Findings suggest potential therapeutic applications for cannabis in treating female arousal and desire issues.

Mechanism Insights

Research reveals interactions between cannabinoid receptors and neural pathways involved in sexual arousal, pleasure response, and orgasmic function.

The Women's Cannabis Project

Community-Centered Research

The Women's Cannabis Project extends our research mission into the broader landscape of women's health and cannabis therapeutics.

Through community partnerships and participatory research methods, we're building an evidence base that centers women's lived experiences alongside clinical outcomes.

What We Do

Advance medical cannabis access for women's health issues as qualifying conditions by petitioning state governments, paving the way for broader recognition of sexual health as a legitimate area of medical need

Conditions we petition for include:

- Female orgasm disorder/difficulty (FOD)
- Endometriosis
- Uterine fibroids
- Ovarian cysts

Female Orgasm Training Institute

Translating research into practice through evidence-based education and clinical training programs

01

Professional Education

Training programs for healthcare providers, therapists, and educators on the neuroscience of female orgasm, assessment techniques, and evidence-based interventions.

03

Patient Resources

Developing accessible educational materials and self-directed learning tools that empower individuals with accurate, research-backed information about sexual wellness.

02

Clinical Applications

Certification courses in therapeutic approaches for sexual health challenges, integrating current research on cannabis therapeutics with established sexological frameworks.

04

Community Impact

Building a network of trained practitioners who can deliver compassionate, informed care that honors the complexity of female sexual experience.

Our Plan for 2026

at the Women's Cannabis Project

- ☐ Continue petitioning states for four conditions of women's health
- ☐ States we are currently in legal hearings with for FOD: Oregon
- ☐ States we have petitioned for FOD but not been approved: Arizona, Arkansas, Mississippi, Ohio, Pennsylvania, New Jersey, Colorado, New Mexico

The Orgasm Project is seeking to fund the Women's Cannabis Project in 2026, to continue the advocacy and policy work we've been working toward since its inception, and to introduce new conditions for women's health to the petition process for medical cannabis qualifying conditions.

Together, we can make history for women's health. Help us stand up for women, their bodies, and their rights.
